

TECHNOLOGY IN THE EDUCATIONAL PROGRAM

Policy Code:

3220

In alliance with state school technology goals, the board is committed to establishing and supporting 21st century information and communications technology systems to foster globally competitive, healthy, and responsible students. The board recognizes the benefits of digital and technology-enabled teaching and learning resources that provide the ability to easily customize curriculum, provide access to current information, and enable access to quality materials at a lower cost than traditional materials. To that end, the board intends to move to classroom digital and technology-enabled teaching and learning resources that are aligned with the current statewide instructional standards as they become available. In addition, to the extent funding permits, the board will endeavor to ensure that all students have access to personal digital and technology-enabled teaching and learning devices to foster the 21st century skills necessary for future-ready learners.

The board expects that information and communications technologies will be integrated across the curriculum and used to support student achievement. Such technologies will also be used to support programs and activities that promote safe schools and healthy and responsible students. The curriculum and instruction committee should provide suggestions in the curriculum guides referenced in policy 3115, Curriculum and Instructional Guides, for integrating technological resources (as defined in Section A below) into the educational program. School administrators and teachers are encouraged to develop additional strategies for integrating technological resources across the curriculum and utilizing the power of technology to improve learning outcomes while making more efficient use of resources. The strategies should be included in the school improvement plan if they require the transfer of funds or otherwise relate to any mandatory or optional components of the school improvement plan.

A. SELECTION OF TECHNOLOGICAL RESOURCES

Technological resources include, but are not limited to, the following: (1) hardware, including both fixed and mobile technologies and devices such as desktop computers, laptops, netbooks, tablets, e-readers, PDAs, smartphones, and gaming devices; (2) software; (3) network and telecommunications systems and services; (4) Internet access; (5) multimedia equipped classrooms; (6) computer classrooms and laboratories; (7) copiers and printers; and (8) other existing or emerging mobile communications systems. All technological resources must be purchased and used in a manner consistent with applicable law and board policy, including laws and policies related to copyright, public records, bidding, and other purchase requirements, accessibility for students with disabilities, staff duties, and standards for student behavior.

Technological resources must meet or exceed the following standards before they may be considered for implementation.

1. Technological resources must support the current statewide instructional standards or the programs of the school system.

2. Technological resources must support the current use of learning and instructional management technologies in the school.
3. Technological resources must be compatible with the condition of the network and other infrastructure resources. The technology officer shall set minimum standards for technological resources that are purchased or donated. Upgrading, hardware conditions, and similar requirements must be maintained to the highest standards.
4. There must be sufficient staff to operate and maintain the technological equipment, programs, and systems.
5. There must be adequate funds budgeted to implement and support the technological resources and to train instructional staff to use the resources to improve educational outcomes.

B. DEPLOYMENT OF TECHNOLOGY TO SCHOOLS

The superintendent shall oversee the development of the school system's technology deployment plan. The plan will be designed to ensure organized, effective, and efficient means of deploying new information and communications technologies. The superintendent shall develop procedures that outline the strategy of the technology deployment plan.

C. BRING YOUR OWN TECHNOLOGY (BYOT) INITIATIVE

Students and staff may use their personal electronic devices in place of or along with their school system assigned devices pursuant to the plan developed by the superintendent or designee and consistent with all applicable policies and regulations. Students who are unable to bring in outside technology will be able to access and utilize school equipment so that no student is excluded from instruction due to lack of access to technology.

D. ELECTRONIC COMMUNICATION AND OTHER COLLABORATIVE TOOLS

The superintendent is authorized to identify collaborative tools and/or other forms of direct electronic communications or Web 2.0 applications for use by instructional personnel for educational purposes to the extent the superintendent deems appropriate and in accordance with policy 7335, Employee Use of Social Media. The superintendent shall establish parameters and rules for use of these tools and shall require instruction for students in how to use such tools in a safe, effective, and appropriate way. Instructional personnel shall make all reasonable attempts to monitor student online activity and shall otherwise comply with the requirements of policy 3225/4312/7320, Technology Responsible Use, when using these tools.

E. TECHNOLOGY-RELATED PROFESSIONAL DEVELOPMENT

The superintendent shall plan a program of technology-enabled professional development that prepares the instructional staff for utilizing digital tools and resources. Professional development shall emphasize technology integration and continuous improvement, including the use of ongoing technology-integrated online-learning activities throughout the course of study. Professional development shall also address the ethical, legal, and practical issues related to social networking and mobile devices in the classroom and other topics deemed necessary by the superintendent or technology officer. School improvement teams should identify any staff development appropriations for technology-related professional development in their school improvement plans. The superintendent and technology officer should assist schools in coordinating staff development needs as provided in policy 1610/7800, Professional and Staff Development.
